FOR IMMEDIATE RELEASE

PACIFIC GEOTECHNICAL JOINS HART CROWSER

Portland, OR (October 12, 2011). Pacific Geotechnical, Inc., has joined Hart Crowser, Inc., a geotechnical, environmental, and natural resources consulting firm. Pacific Geotechnical will augment Hart Crowser's geotechnical and geological capabilities in Oregon and southwest Washington. Their staff and experience are especially strong in public works projects (water, wastewater and storm water), transportation, commercial and industrial development, foundation design, sustainable practices, geologic hazards (rockfall and landslide evaluations and mitigation) and forest practices. They have completed projects throughout the Pacific Northwest and Hawaii.

"It's great to be collaborating with Tim Blackwood and Greg Landau again," said David Winter, Hart Crowser's Business Development Director, who previously worked with them while with another firm. "We are already teaming together and know Pacific Geotechnical will be a great fit for Hart Crowser."

Hart Crowser has been in an expansion mode for the past year, to support contracts for clients such as the Port of Portland, Portland Development Commission, Oregon Department of Environmental Quality, US Navy, and Washington State Department of Transportation, and on major contracts such as the SR 520 Floating Bridge Replacement, Alaskan Way Tunnel, and Husky Stadium Redevelopment. Their geotechnical division has

recently won awards for the 505 First Avenue South (Starbucks) Building and the SR 519 Intermodal Access Project in Seattle.

Hart Crowser is a 100-person, employee-owned consulting firm with headquarters in Seattle, Washington. Visit the firm's website at www.hartcrowser.com for more information.
