**FOR IMMEDIATE RELEASE**

### **HART CROWSER NAMES NATURAL RESOURCES MANAGING PRINCIPAL**

(January 20, 2017) Pam Gunther has joined Hart Crowser as Principal Ecologist and Natural Resources Managing Principal. Her twenty-five years of experience include environmental assessments, environmental impact statements, habitat conservation plans, and documentation for threatened and endangered species, notably salmon and steelhead throughout the western United States and Alaska. Gunther supported preparation of the environmental assessment for the 2016-2017 Puget Sound harvest list of agreed fisheries, which was key in restoring fishing seasons last summer when salmon stocks were low. She served on the Board of Directors for the International Association for Impact Assessment and is actively involved in biodiversity leadership for the organization, which shares biodiversity knowledge internationally.

Hart Crowser is an employee-owned, 110-person engineering, science, and consulting firm headquartered in Seattle, with seven offices in Washington, Oregon, Hawai'i, and Alaska. The firm specializes in geotechnical and environmental engineering, natural resources, environmental remediation, stormwater services, and disaster resilience.
